

DID YOU KNOW?

- 1 kilo of paper results in approximately 1 kilo of CO₂ during its production (1.2kg of CO₂ for unrecycled, and 0.7kg of CO₂ for recycled paper).
- If we take office paper which is usually 80g/m², then we end up with 16 pages of paper per square meter.
- Dividing this 80g by the 16 sheets, we come to a figure of 5g of CO₂ per page.
